

Senior .Net Developer

Applied Decision Technologies, Inc. (www.ADecTec.com) is a dynamic and fast-growing software company located in Lawrenceville, GA, with development centers in Atlanta and India.

ADecTec is developing groundbreaking optimization based software products for manufacturing and service planning and operations. Our solutions enable our customers to save on cost and improve operational efficiencies by optimizing planning and execution operations.

We're seeking a hands-on senior level .Net developer with experience in start-up companies, strong leadership skills and the passion to become a key member of our development team. This position is located in Lawrenceville, GA, and will be involved with all product engineering related activities.

Qualifications:

- Hands on product development experience in Manufacturing/Services Planning and Scheduling, and logistics.
- 7+ years of experience designing and developing complex .NET systems and passionate about developing quality software for a product company. Experience with VisualStudio.Net team system 2008 and Team Foundation Server
- ASP.NET with C# with latest .NET 3.5 SP1 framework. Active experience with MVC, EntityFramework, LINQ, WCF, Infragistics and/or Telerik, WWF, AJAX, JQuery and Silverlight
- OOA, OOD, OOP
- Design Patterns experience and working knowledge
- XML, Web Services
- N-Tier development experience
- Experience with Agile methodologies (Scrum)
- Good understanding of Azure and other cloud computing platforms like Amazon is highly desired
- Microsoft Certification MCSD/MCPD is highly desired
- Previous experience with Optimization software and CPLEX is a plus
- Enthusiastic with commitment to quality. Demonstrated team-building and motivational skills.
- BS Degree in a computer science, engineering, or related technical field is required.

Responsibilities:

- Will plan and lead efforts to architect, build and deploy the next generation of applications.
 - Participate in the analysis and development of business requirements.
 - Ensure adherence to consistent processes, standards, and total quality practices.
 - Maintain, improve and optimize our internal software development process
 - Establish and adhere to set development plans and release dates – communicate release plans effectively to the development teams and sales.
 - Oversee design and implementation of maintenance projects for existing systems
 - Contribute strong technical expertise to software product development for diverse verticals
